Compliance with the EU Conflict Minerals Regulation

Regulation (EU) 2017/821

Oras Group is committed to responsible business practices and ethical sourcing throughout our supply chain.

The **EU Regulation 2017/821** on conflict minerals establishes due diligence obligations for EU importers of tin, tantalum, tungsten, and gold (3TG) when these minerals are imported above defined annual volume thresholds. The Regulation's requirements are aimed at importers of raw materials and smelters/refiners, ensuring responsible sourcing from conflict-affected and high-risk areas.

As a manufacturer of bathroom products, Oras Group is **not an importer of raw 3TG minerals and therefore is not directly subject to the EU Conflict Minerals Regulation**. Nevertheless, we recognize that some of our customers may have due diligence obligations under this Regulation and related corporate policies.

To support our customers, we engage with our suppliers to ensure transparency within the supply chain and to promote responsible sourcing practices. Some of our products contain small quantities of 3TG — for example tin in brass alloys and solder, and small amounts of gold or tungsten in electronic components — but Oras Group does not import these minerals in raw form; they reach our products through our suppliers. On request, we support customers with the supply-chain information available to us (for example CMRT declarations) for their own due diligence.

We remain committed to cooperating with our partners to improve supply chain transparency and to support responsible sourcing initiatives.
