

UNIFIED EUROPEAN WATERLABEL (UWL)

The Unified Water Label (UWL) is labeling scheme for water using products which offers clear, concise and easy to understand messaging about water and energy consumption.

Reduced water waste saves energy, which in turn reduces carbon emissions and saving money.

The label clearly shows water and energy consumption in relation to the specific product, e.g. touchless products has a much lower energy consumption than manual operated ones by delivering water only when needed.

Oras Group has registered many products to UWL database and provides UWL label to point this out.

For more information please visit the website of the European Water Label Association (UWLA): <https://uwla.eu>
