Dual-Use Declaration

Regulation (EU) 2021/821

The **EU Dual-Use Regulation (EU) 2021/821** (which recast and replaced Regulation (EC) No 428/2009) establishes an EU regime for the control of the export, brokering, transit and transfer of **dual-use items** — goods, software and technology that can be used for both civilian and military purposes, including items relevant to the proliferation of weapons. Controlled items are listed in Annex I to the Regulation.

The products manufactured and supplied by Oras Group — faucets, showers, sanitary fittings and related bathroom products — are standard civilian sanitary goods. They are not listed in Annex I of the Regulation and have no military functionality or dual-use application. Any cryptography used in our connected products (for example standard Bluetooth encryption) is mass-market functionality that is not controlled under Annex I.

Accordingly, the products delivered by Oras Group are **not subject to** the export-control obligations of the EU Dual-Use Regulation. This statement is provided for the information of our customers and does not remove any obligations that may apply to the exporter or end user under their own circumstances.
