EU Data Act statement

Regulation (EU) 2023/2854

The **EU Data Act (Regulation (EU) 2023/2854)** governs access to, and sharing of, the data generated by connected products and related services. It applies from 12 September 2025; its data-access-by-design requirement applies to connected products placed on the market from 12 September 2026.

Some of Oras Group's products are connected (Bluetooth / app-enabled) faucets that generate usage and diagnostic data – for example settings, flow and temperature, usage counts, battery status and maintenance information, read via our apps. For these products, Oras Group acts as a "data holder", and the user (the customer who owns or leases the product) has the right under the Data Act to access that data and to have it shared with a third party of their choice. The Data Act's general user-access rights apply now; its data-access-by-design and pre-contract information requirements apply to connected products placed on the EU market from 12 September 2026, and we are implementing these for our new connected products.

Transparency before purchase

For connected products placed on the EU market from 12 September 2026, we make available – before the purchase or lease is concluded – information on the data the product generates, its nature, format and estimated volume, how the user can access it on an ongoing basis, and whether and for what purposes Oras Group itself uses that data.

Access for the user

Where data is not directly accessible from the product, we make the readily-available data accessible to its user on request – free of charge and, where technically feasible, continuously and in real time – while protecting trade secrets, security and the rights of others.

Sharing with third parties

On the user's request, we make that data available to a third party of the user's choice (for example a facility-management system or maintenance provider), on fair, reasonable and non-discriminatory terms and conditions.

Fair use of data

We do not use the non-personal data generated by a connected product to develop a product that competes with it, and we apply fair and non-discriminatory contract terms for access to and use of that data.

Personal data and security

Where the data is personal data, it remains governed by the GDPR, and access may be limited where it would affect the rights of others. Data access and sharing are provided through secure means.

This statement reflects the status of Regulation (EU) 2023/2854 and Oras Group's connected products as of 23 June 2026. It is reviewed periodically and updated as the Data Act's provisions take effect.
