

HANSA

Compliance with the General Product Safety Regulation

Regulation (EU) 2023/988 (GPSR)

Oras Group is committed to ensuring that all our products, including faucets, showers, spare parts, and accessories, comply with the requirements set forth in the **General Product Safety Regulation (EU) 2023/988**. This regulation mandates that products placed on the market are safe for consumers when used under normal or reasonably foreseeable conditions.

Evaluation of Safety Requirements

All products within our portfolio are thoroughly assessed for safety in accordance with the principles established by the General Product Safety Regulation (GPSR).

Safety assessment and technical documentation

Before placing a product on the market, we carry out an internal safety assessment and maintain the technical documentation needed to demonstrate its safety. Chemical-safety aspects are addressed under REACH (see our separate REACH declaration).

Traceability and economic operators

Our products and packaging carry the information needed to identify the product and the responsible economic operator and to ensure traceability. For products placed on the EU market, a responsible economic operator established in the EU is identified as required by the GPSR.

Incident handling and market surveillance

Where a product is found to present a risk, we take the necessary corrective action and, where required, notify the relevant authorities (via the EU Safety Gate/Business Gateway) and cooperate with market-surveillance authorities. We regularly monitor updates to the GPSR and related regulations to ensure ongoing compliance.

Testing and Approving

Our products are tested with accredited third-party laboratories which requires whitelisted or certified materials (metals and polymers) and test reports covering the mechanical properties. Our common integrated management system includes quality (ISO 9001), environment (ISO 14001), energy (ISO 50001) and occupational health and safety management (ISO 45001) and they are certified by external party.

All new products are tested comprehensively during the R&D process, before starting the serial production.

During serial production we are conducting several tests to confirm that our products fulfill all the requirements.

Our products are designed and tested to comply with the relevant legislation and EN standards applicable to them.
